Katzenpost Zine
episode 0x00:
what anonymous
communication is NOT

**non-anonymous
communication**

ALL Internet communication protocols are NOT anonymous. This means they snitch on you, your IP address and geographic location. If you are a journalist, whistleblower, activist, revolutionary, or just a normal fucking human being that doesn't like to be spied on then this shit is relevant to you.

Here's a list of companies, services and protocols which are NOT anonymous:

- Telegram
- Signal
- WhatsApp
- Wire
- Twitter
- Facebook
- Google
- Bitcoin
- Bittorrent

**But Signal is end to end
encrypted, doesn't that mean
it's anonymous?**

NO!! Signal is NOT anonymous and high risk people should NOT be using it. Services like Signal which are end to end encrypted leak all kinds of metadata such as:

- IP address
- geographic location
- message size
- message sequence
- message receiver
- message sender
- entire social graph
